October 7, 2021

**Attention: New Transferrin test and Iron Panel, change in calculation of TIBC and % Saturation**

Valued AMS Client,

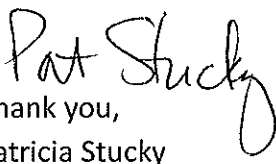

AMS is pleased to offer in-house Transferrin testing starting October 26th, 2021. The specimen of choice is 1mL of serum, refrigerated up to 3 days. The test code will remain the same, TRSF, along with the price and CPT code.

Bringing this testing onboard will allow us to standardize the reporting of TIBC and %saturation in the Iron Profile between the Ascension hospitals and AMS, using the Transferrin to calculate the TIBC and %SAT. AMS will be changing our Iron Profile test code to IRONV. Though the price and CPT codes will remain the same.

The Iron Profile, IRONV, will include the Transferrin result along with the IRON, TIBC and %SAT starting October 26th, 2021.

Please note: There will be changes to the reference ranges for the TIBC and %SAT. The reference ranges will now be gender and age related.

If you have any questions or concerns, please call 316-265-4533 option 1.

  
Thank you,  
Patricia Stucky
